Franklin County COVID-19 Emergency Operations Center
Three (3) additional COVID-19 Related Resident Deaths reported
From Louisburg Nursing Center, total outbreak-related deaths: Eleven (11) Residents.

From:

Scott S. LaVigne, MSW, MBA
Franklin County Health Director
Public Information Officer, Franklin County COVID-19 Emergency Operations Center (EOC)

Communication:

Sadly, the Louisburg Nursing Center (202 Smoke Tree Way, Louisburg, NC 27549) reported an additional three (3) COVID-19 related Center-resident deaths. This brings the facility's total number of COVID-19 outbreak-related fatalities to eleven (11). Additionally, nine (9) of the center's residents are currently hospitalized related to this outbreak.

This week, in addition to the guidance we have already provided to skilled nursing facilities to date, Franklin County is increasing our outreach to leadership at all Nursing Homes in Franklin County to individually ensure that each facility has the latest guidance and the PPE needed to effectively prevent a COVID-19 outbreak, and if necessary, to effectively manage an outbreak should one occur. These non-regulatory outreach efforts are to ensure the Franklin County COVID-19 EOC and the Franklin County Health Department can effectively advocate for these facilities to receive the training, PPE, and staffing needed to ensure the impact of COVID-19 is as low as possible in their respective facilities.

As of the date/time of this communication, we anticipate these three (3) COVID-19 related Center deaths from today's release will most likely be added to the Franklin County totals on the NCDHHS COVID-19 site on Tuesday, 4/21/2020. Look for more updates from the Franklin COVID-19 EOC as more information becomes available.

Steps We All Need to Take:

Guidance for Those with Fever & Upper Respiratory Symptoms:

If you feel illness coming on, isolate yourself and call your doctor if your symptoms worsen. Everyone with fever and respiratory symptoms should isolate themselves from everyone until BOTH conditions below are met:

- At least 7 days since symptom onset.
- AND**
- Over 72 hours after symptom resolution (i.e. absence of fever without the use of fever-reducing medication and improvement of respiratory symptoms).

Close Contacts:

- Those with close contact to a person with fever or respiratory illness are encouraged to stay home to the extent possible, and to monitor themselves for symptoms.

Recommendations:

What is important is that everyone do their part to keep us all safe:

- avoid touching your face;
- Wash your hands frequently & thoroughly using warm water and soap for at least 20 seconds (sing "Happy Birthday" twice, or use your own tune)
- use hand sanitizers frequently;
- cough/sneeze into your arm, or if you use a tissue, immediately throw it out and wash your hands.
- Isolate yourself from others if you're sick;
- stay home from work/school or going out anywhere if you feel the slightest bit sick.
- Everyone needs to avoid vulnerable populations, including: those over 65; those with underlying health conditions and/or weakened immune systems; and those who are pregnant.
- Do not group together, and certainly not in groups any larger than 10, and keep six (6) feet apart from anyone you don't live with.
- If you have to go out, please maintain at least 6 feet of space between you and others.
- If you have to go out, feel free to use a cloth covering to protect others from **you**, if you happen to have the virus but just aren't showing symptoms yet;
- Don't count on gloves or a cloth mask alone to keep you safe, wash your hands, don't touch your face, and use hand sanitizer if you have it.
- If you are lucky enough to have Personal Protective Equipment (gloves, masks etc.) use it correctly (wearing a pair of gloves everywhere you go means you now have collected everything you've been in contact with, on those gloves.)
- Live by the motto **"If they don't live with you in your house, then they can't come-in, and if you meet them in public, keep them at least 6 feet away."**
