Appendix 1. Roadway Project List – CAMPO and DCHC MPO

Projects are color-coded by MPO (yellow for CAMPO and green for DCHC MPO) and separated by time period. The three time periods, 2030, 2040, and 2050, are used in the financial plan. The attribute information for each project is presented by columns, and includes the following:

- MTP ID – This unique number facilitates the tracking and mapping of projects in the plan.
- Highway Project – The name of the road.
- From/To – Usually identifies the name of the two roads between which the project is to be constructed.
- Existing Lanes – The number of current travel lanes. A blank value indicates an interchange or a new road alignment – in other words, there is no existing road.
- Proposed Lanes – The number of travel lanes proposed in the plan; if the number of lanes does not increase, the project does not propose to add through lanes.
- Improvement Type –
 - Widening is the addition of travel lanes.
 - Modernization can include safety, intersection (e.g., turn lanes), multimodal or other improvements, but does not include the addition of travel lanes.
 - Upgrade refers to capacity and safety improvements to interchanges.
 - New Location is a new roadway.
 - New is the conversion of an intersection to an interchange.
 - Freeway is the conversion of an existing road to a limited access highway (which is a roadway type often referred to as interstate).
 - Expressway is the conversion of an existing road to a highway that is mostly limited access.
- Length – The centerline mileage of the project.
- Estimated Cost – The total costs include those estimated costs to be incurred from 2018 through 2045. Cost estimates come from feasibility studies, current and past Transportation Improvement Programs (TIP), NCDOT's SPOT prioritization process, and the NCDOT Contract Standards and Development Unit project cost workbook.
- STI – This indicates the project's STI (Strategic Transportation Investment) funding tier: statewide, regional or division.
- Regionally Significant – Regionally Significant projects provide access to and from the region, or to major destinations in the region. Note that the FHWA functional classifications serve a different purpose than the local functional classification used by the MPO, and as a result, the two classification systems are significantly different. Generally, the regionally significant designation includes interstate highways, U.S. highways, freeways, and North Carolina signed roads that are the primary road in a corridor. Rail transit facilities, which are described in a separate section, are considered regionally significant. The Regionally Significant designation can be important if the region is required to show the Air Quality Conformity Determination (AQ Conformity) for the MTP.
- AQ Exempt - Under AQ Conformity, if a Regionally Significant project is changed (e.g., completion year, capacity) after the 2050 MTP has been adopted, then the Conformity Determination process might have to be redone. In this column, exempt projects are indicated by the regulation section that provides the exemption, e.g., 93.126.
- TIP# -- The project reference number for those projects which are contained in the 2018-27 Transportation Improvement Program (TIP).
