

A capital campaign for

PROJECT IMPACT

BUILDING NEW FUTURES

When the project is completed, the results will speak for themselves

- 1** By turning the two existing coolers into one larger cooler **the project will result in 33% more cooler capacity**
- 2** Due to a significant increase in the footprint of our freezer space and the ability to have three tiers of racking in the new addition **the project will result in 200% more freezer capacity**
- 3** The project will give us the opportunity to reallocate one of the two existing clean rooms while adding two new clean rooms

that can be configured into one large clean room to accommodate larger volunteer groups; **which will increase the capacity of volunteers we can have at one time by 33%**

- 4** By adding new shipping/receiving bays, increasing the freezer and cooler capacities and adding multiple access points to the renovated freezer and cooler spaces **the efficiency and safety of the food handling process will increase**

Short term impacts include:

- Significantly increase the quantity of fresh and frozen nutritious food to clients served by our partner agencies.
- Process incoming fresh produce faster so it maximizes the amount of shelf time still left on the product once it gets home
- Increase the efficiency of the food handling process from intake to delivery.

Long term impacts include:

- Decreased instances of negative health outcomes of food insecurity like:
 - high blood pressure
 - high rates of diabetes
 - high cholesterol rates
 - elevated high school dropout levels
